The following is an examiner's reasons for allowance of claim 1: The prior art teaches a method of protecting a semiconductor device, comprising a DC power source, a semiconductor device, a load, a circuit element, cutting of a conduction of the semiconductor device, but does not disclose setting a constant of the circuit element so that the reference voltage is not greater than a critical voltage, wherein the critical voltage is a product of an on-resistance of the semiconductor device when its channel temperature is at an upper limit of a permissible temperature, and a minimum current value which causes the channel temperature to reach the upper limit of the permissible temperature by the self-heating due to Joule heat. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's reasons for allowance of claim 3: The prior art teaches a protection apparatus for a semiconductor device, comprising a DC power source, a load, a semiconductor device, a circuit element, a comparator, a cut off section, but does not disclose that a constant of the circuit element is set so that the reference voltage is not greater than a critical voltage, and wherein the critical voltage is a product of the on-resistance of the semiconductor device when its channel temperature is at an upper limit of a permissible temperature, and a minimum current value which causes the channel temperature to reach the upper limit of the permissible temperature by the self-heating due to Joule heat. This feature in combination with the rest of the claim limitation is not anticipated or rendered obvious by the prior art of record.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dharti H. Patel whose telephone number is 571-272-8659. The examiner can normally be reached on 8:30am - 5pm.
